SUMMARY

Artificial Intelligence Fresh Graduate with production-grade experience bridging advanced machine learning research and scalable software architecture. Proficient in Python, Java, and modern web frameworks (React/FastAPI), with deep expertise in deploying Generative AI, Agentic workflows (LangGraph), and predictive ML models to the cloud (AWS/GCP). Proven track record of taking ownership of complex business problems, from engineering robust data pipelines and REST APIs to optimizing deep learning models for resource-constrained edge hardware. Bilingual (Mandarin/English) and highly adaptable, bringing a proactive builder's mindset to fast-paced engineering teams. Available to start immediately..

TECHNICAL SKILLS

- **Programming & Backend:** Python, Java, JavaScript, SQL, FastAPI, RESTful APIs, Microservices.
- **GenAI & LLMs:** LangGraph, LangChain, RAG Pipelines, Prompt Engineering, Claude / Gemini APIs.
- **AI & Machine Learning:** TensorFlow, PyTorch, Scikit-learn, LightGBM, Computer Vision, Time-Series Analysis.
- **Cloud, MLOps & DevOps:** AWS (EC2, S3), GCP, Docker, Kubernetes (Concepts), CI/CD, Git, DVC.
- **Web Development:** React, Next.js, Vue.js, Streamlit, HTML/CSS.
- **Languages:** Mandarin (Native), English (Professional - MUET Band 5), Malay.

EDUCATION

University of Malaya (Kuala Lumpur, Malaysia)
Bachelor of Computer Science (Artificial Intelligence)

Oct 2022 - March 2026
CGPA: 3.58/4.00

Kolej Matrikulasi Melaka (Melaka, Malaysia)
Physical Science

July 2021 - May 2022
CGPA: 4.00/4.00

WORKING EXPERIENCE

Gamer2Gamer Sdn Bhd (Kuala Lumpur, Malaysia) - AI Engineer (Internship)

July 2024 - Jan 2025

- **Full-Stack GenAI Development:** Designed and deployed an automated RFI Generator application, integrating Claude API and OCR with a Vue.js frontend and Python backend to streamline unstructured document processing.
- **MLOps & Cloud Deployment:** Automated cloud infrastructure provisioning by deploying GCP VMs and AWS endpoints for resource-intensive AI models, utilizing DVC to establish rigorous data versioning standards.
- **Model Optimization & Evaluation:** Engineered and optimized production-grade LightGBM models for eKYC Identity Verification, achieving 95% validation accuracy in detecting AI-generated selfies and reducing false positives in Moire detection (AUC 0.74).

YTL AI Labs | Remote / Kuala Lumpur- AI Data Annotator

July 2025 – Dec 2025

- **LLM Fine-Tuning Pipelines:** Contributed to the training and evaluation of 'ILMU', Malaysia's first Sovereign Large Language Model, analyzing massive datasets to identify linguistic patterns.
- **Data Security & Quality Assurance:** Performed rigorous logical consistency checks and OCR validation to ensure high-fidelity datasets, prioritizing data privacy and mitigating hallucination risk,

PROJECTS

Sleep Anomaly Detection System | Final Year Project | Deep Learning & Edge AI | [Github Repo](#)

- **Hardware-Software Co-Design:** Engineered a hybrid Edge-AI framework utilizing CNN-LSTM networks to process real-time physiological time-series data.
- **Model Compression:** Successfully optimized and compressed the deep learning model to just 157.2 KB using TensorFlow Lite (TFLite), ensuring stable, low-latency inference on resource-constrained hardware.
- **Data Engineering:** Solved critical data scarcity challenges by implementing advanced augmentation techniques to increase the viable training dataset by 33x.

IntelliFlix | AI-Powered Semantic Search & Agentic Platform | [Github Repo](#)

- **Scalable Architecture:** Designed a complete full-stack web application utilizing Next.js, React, and TypeScript for the frontend, coupled with a highly responsive FastAPI/Python backend.
- **Context-Aware GenAI:** Developed an optimized RAG pipeline using ChromaDB and Gemini Pro to synthesize complex, unstructured data, implementing an "Explainable AI" citation layer to ensure response transparency.
- **Containerization:** Packaged the application stack using Docker to ensure consistent, production-grade deployment.

F1 Race Strategy Agent | Autonomous Reasoning & Telemetry Analysis | [Github Repo](#)

- **Agentic Orchestration:** Architected a multi-step reasoning agent using LangGraph (ReAct pattern) capable of making autonomous strategic decisions without human intervention.
- **Live API Integration:** Wrote robust Python code to ingest live telemetry data via third-party REST APIs (FastF1), serving insights through an interactive Streamlit dashboard.

Hybrid Financial Fraud Detection System | End-to-End AML Pipeline | [Github Repo](#)

- **Large-Scale Data Processing:** Architected a highly scalable, two-layer detection pipeline utilizing Isolation Forests and LSTM Autoencoders to process and evaluate over 1.1M+ transaction records.
- **Automated Analytics:** Integrated GenAI APIs to autonomously translate complex anomaly scores into regulatory-compliant Suspicious Activity Reports (SARs).

LEADERSHIP & ACTIVITIES

- ★ Vice Director - Dean's Cup Faculty of Computer Science Universiti Malaya
 - Demonstrated strong leadership and collaboration by managing over 50 committee members across multiple departments to successfully execute a 3-day event for 300+ participants.
- ★ Keeperku- Zoo Negara Malaysia
 - Showcased a commitment to community impact and adaptability through 42 hours of hands-on conservation work.

SPOKEN LANGUAGES

Mandarin (Native), English (Professional - [MUET](#) Band 5), Malay (Conversational), Spanish (Basic)
